

CRAB CREEK BEAUTIFICATION PHASE II

HOW THE PROCESS WORKS

Step 1 - Interest & Consultation

So, you're thinking about a project or location for a project and need a little guidance? We can help! Once you contact the NRVRC, we'll help get you started on the right track. After discussing your project goals, we'll help guide you through the application process and submission for review. This step may include NRVRC site visits, phone calls, or research to determine how your potential project fits within the program guidelines. Don't worry—we're here to answer your questions and guide you through the entire process.

Step 2 - Design and Application

The second step of the process involves a formal application and design. This simple application and design provides a roadmap outlining the project's goals, why it's needed, how it will look and function, and how it will be maintained. Once complete, it will be submitted for review. Similarly to Step 1, we'll be here to answer any questions, help develop your ideas, and make sure the process goes as smoothly as possible.

Step 3 - Construction

Once your application has been approved, we move to the stage where your project begins to take shape. It is important to keep in mind that, as your contractor's invoices become due, it is the applicant's responsibility to pay them upfront and save all invoices and receipts for the review and reimbursement step.

Step 4 - Review & Reimbursement

After construction is complete and the contractor has submitted their final invoice, NRVRC will conduct an on-site review to verify that the project was completed according to the approved plan. Once the project has been deemed complete, the applicant will submit all receipts and invoices for reimbursement, which will be processed according to the approved cost-share percentage (explained separately).

Step 5 - Follow-up

To ensure long-term, lasting benefits to the Crab Creek Watershed, NRVRC will swing by with follow-up visits for the lifespan of the BMP. These aren't weekly or even monthly visits, but rather annual check-ins to evaluate the project's success and they serve as an opportunity to evaluate and recommend potential improvements or other resources for further protection of the Crab Creek Watershed!
